Aaditya Shah

I BUILD APPS

San Jose, California | github.com/aShah2025 | Devpost | aadityashah.vercel.app

SUMMARY

High-school student at Leland High in San Jose. I build iPhone apps, AI agents and games. Kura earned Congressional recognition in the 2025 Congressional App Challenge; I'm competing again in 2026 with Canary.

EXPERIENCE

iOS Developer, Canary — 2026 · Congressional App Challenge · with Rishith Chennupati

Catches sleep and mood drift before you do.

- Each morning a **30-second face read** lays ARKit's 3D face mesh over the front camera and tracks eyelid openness and facial movement 60 times a second.
- Combines it with **heart rate, HRV, breathing and sleep** from Apple Health, flags drift from your own four-week baseline, and runs entirely on the phone. Its crisis-language check caught **255 of 255** test phrases.

iOS Developer, Kura — 2025 · Congressional App Challenge

- A SwiftUI calorie and macro tracker that keeps calories, protein, carbs and fat quick to log. **Earned Congressional recognition.**

Builder, Wayfinder — 2026 · ImpactHack

Bike routes that actually listen.

- Describe how you want to ride and it builds real routes, **measures every street on them**, and picks the best fit. The AI only turns your words into settings; routing and scoring are my own code on Valhalla and OpenStreetMap.

Builder, CultureRisk — Qloo Agentic Hackathon

Know the audience before you greenlight.

- An **autonomous research agent** on Qloo's taste graph that plans across four endpoints, re-plans as evidence comes in, and writes a memo with a 0–100 culture-risk score traced to logged calls. Also ships as an MCP tool.

AWARDS & RECOGNITION

- **Congressional recognition, Congressional App Challenge 2025.** For Kura.
- **Spelling Bee Champion, Bret Harte Middle School** (7th grade), then 15th of 140 at regionals. Also 3rd in the Geography Bee (7th) and Spelling Bee (6th).

GITHUB ACTIVITY

218 CONTRIBUTIONS · LAST YEAR | **11** PUBLIC REPOS | **Top 10%** ON GITHUB

Swift, Python, JavaScript, TypeScript and C# across iOS apps, AI agents, web tools and games. Most of my work is in private repos.

SELECTED PROJECTS

Refill. Classroom supplies. Drafts supply requests from plain English, on live DonorsChoose data via a Cloudflare Worker.

CourseFit. School scheduling. Turns student course picks into conflict-free schedules around teacher availability and room capacity.

WingLab. Aerodynamics on the Mac. Reshape a wing, change airflow and angle of attack, and compare lift, drag and efficiency.

Sum. Budgeting. Built with Rishith Chennupati for saving toward the things you actually want.

Turbo Lane, Formula Racer. Games. A three-lane arcade racer, and a 3D racing game in Unity inspired by F1 games, in development.

ACTIVITIES

DEBATE	Policy and Congressional debate
KUNG FU	5 years, red-black belt; black belt test 2027
PIANO	6 years, classical, RCM Level 9
CLUBS	Leland Hackathon, Leland Motorsport

TECHNICAL SKILLS

LANGUAGES	Swift, Python, Java, JavaScript, TypeScript, HTML / CSS, C# (Unity), C++ (learning)
iOS	SwiftUI, ARKit, HealthKit, Xcode
AI / AGENTS	Gemini API, Qloo API, MCP, agent loops
WEB	FastAPI, Node.js, Cloudflare Workers, Three.js
TOOLING	Claude Code, Codex, VS Code, PyCharm, Git
